I don't understand why one reviewer thought this was not a "how-to" book, as directions make it very easy to follow and succeed. Tells you what you need to start, how to set up and how to do it on various surfaces. Book

is laid out with list of materials needed, set up and how-to for each surface. Neat ideas to spur your imagination. Very helpful book for those wanting to transfer on fabric, less helpful for those wanting to transfer on ceramic, however, it still has value for teaching the process and leading you down new roads. 1 of 1 people found the following review helpful. Transfer: Images on Glass, Fabric, Ceramic, Stone, Paper, Metal, Plastic...By Brenda MortonLove this book..if your using transfer film you need this book!!! Transfer starts by acquainting crafters with the tools of the trade, such common household items as an iron and a color printer, and then suggests all sorts of surfaces for decoration -- linens, canvas, ceramics, wooden mats, glass, and cork. Design and application concepts in hand, crafters can choose from the wide variety of heat transfer projects -- personalizing cloth napkins, a canvas bag, sofa cushions, curtains and drapes; customizing dishes, ceramic tiles, wooden placemats, biscuit tins, glass jugs, and vases.
